	f. Aromatic polyamide pulp.
ML15	'First generation image intensifier tubes'
	Electrostatically focused tubes, employing input and output fibre optic or glass face plates, multi-alkali photocathodes (S-20 or S-25), but not microchannel plate amplifiers.
ML22	'In the public domain'
	This means 'technology' or 'software' which has been made available without restrictions upon its further dissemination.
	<i><u>Note</u></i> <i>Copyright restrictions do not remove 'technology' or 'software' from being 'in the public domain'.</i>

---

ML5, 19	'laser'
	An assembly of components which produce both spatially and temporally coherent light that is amplified by stimulated emission of radiation.
ML10	'Lighter-than-air vehicles'
	Balloons and airships that rely on hot air or on lighter-than-air gases such as helium or hydrogen for their lift.
ML17	'Nuclear reactor'
	Includes the items within or attached directly to the reactor vessel, the equipment which controls the level of power in the core, and the components which normally contain or come into direct contact with or control the primary coolant of the reactor core.
ML8	'Precursors'
	Speciality chemicals used in the manufacture of explosives.
ML21, 22	'Production'
	Means all production stages, such as: product engineering, manufacture, integration, assembly (mounting), inspection, testing, quality assurance.
ML8	'Propellants'
	Substances or mixtures that react chemically to produce large volumes of hot gases at controlled rates to perform mechanical work.
ML4, 8	'Pyrotechnic(s)'
	Mixtures of solid or liquid fuels and oxidizers which, when ignited, undergo an energetic chemical reaction at a controlled rate intended to produce specific time delays, or quantities of heat, noise, smoke, visible light or infrared radiation. Pyrophorics are a subclass of pyrotechnics, which contain no oxidizers but ignite spontaneously on contact with air.
ML22	'Required'
	As applied to 'technology', refers to only that portion of 'technology' which is peculiarly responsible for achieving or exceeding the controlled performance levels, characteristics or functions. Such 'required' 'technology' may be shared by different products.
ML7	'Riot control agents'
	Substances which, under the expected conditions of use for riot control purposes, produce rapidly in humans sensory irritation or disabling physical effects which disappear within a short time following termination of exposure. (Tear gases are a subset of 'riot control agents').
ML17	'Robot'
	A manipulation mechanism, which may be of the continuous path or of the point-to-point variety, may use sensors, and has all the following characteristics:
	a. Is multifunctional;
	b. Is capable of positioning or orienting material, parts, tools or special devices through variable movements in three-dimensional space;

- 
- c. Incorporates three or more closed or open loop servo-devices which may include stepping motors; and
  - d. Has 'user-accessible programmability' by means of the teach/playback method or by means of an electronic computer which may be a programmable logic controller, i.e. without mechanical intervention.

Note *The above definition does not include the following devices:*

- 1. *Manipulation mechanisms which are only manually/teleoperator controllable;*
- 2. *Fixed sequence manipulation mechanisms which are automated moving devices, operating according to mechanically fixed programmed motions. The programme is mechanically limited by fixed stops, such as pins or cams. The sequence of motions and the selection of paths or angles are not variable or changeable by mechanical, electronic or electrical means;*
- 3. *Mechanically controlled variable sequence manipulation mechanisms which are automated moving devices, operating according to mechanically fixed programmed motions. The programme is mechanically limited by fixed, but adjustable, stops, such as pins or cams. The sequence of motions and the selection of paths or angles are variable within the fixed programme pattern. Variations or modifications of the programme pattern (e.g. changes of pins or exchanges of cams) in one or more motion axes are accomplished only through mechanical operations;*
- 4. *Non-servo-controlled variable sequence manipulation mechanisms which are automated moving devices, operating according to mechanically fixed programmed motions. The programme is variable but the sequence proceeds only by the binary signal from mechanically fixed electrical binary devices or adjustable stops;*
- 5. *Stacker cranes defined as Cartesian coordinate manipulator systems manufactured as an integral part of a vertical array of storage bins and designed to access the contents of those bins for storage or retrieval.*

ML21

'Software'

A collection of one or more 'programmes' or 'microprogrammes' fixed in any tangible medium of expression.

ML19

'Space qualified'

Products designed, manufactured and tested to meet the special electrical, mechanical or environmental requirements for use in the launch and deployment of satellites or high altitude flight systems operating at altitudes of 100 km or higher.

ML18, 20

'Superconductive'

Refers to materials, (i.e. metals, alloys or compounds) which can lose all electrical resistance (i.e. which can attain infinite electrical conductivity and carry very large electrical currents without Joule heating).

Technical Note

The 'superconductive' state of a material is individually characterised by a 'critical temperature', a critical magnetic field, which is a junction of temperature, and a critical current density which is, however, a junction of both magnetic field and temperature.

ML22

'Technology'

Specific information necessary for the 'development', 'production' or 'use' of a product. The information takes the form of technical data or technical assistance.

Technical Notes

1. *Technical data' may take forms such as blueprints, plans, diagrams, models, formulae, tables, engineering designs and specifications, manuals and instructions written or recorded on other media or devices such as disk, tape, read-only memories.*
2. *Technical assistance' may take forms such as instruction, skills, training, working knowledge, consulting services. Technical assistance' may involve transfer of technical data'.*

ML21, 22

'Use'

Operation, installation (including on-site installation), maintenance (checking), repair, overhaul and refurbishing.
